Solvtopia, LLC
Internet Security

Introduction

In this modern age Internet Security is a must! At Solvtopia, LLC we pride ourselves on providing multiple levels of security across our network of servers.

Secure Web Access

All projects (Web, API, Mobile) are protected by Comodo PositiveSSL Certificates with 2048 bit signatures and 128/256 bit encryption. These certificates are trusted by all major browsers and mobile devices so you can be sure your data is secured!

Server Network Security

Our servers are protected by a Fortinet FortiGate 60D hardware security appliance which provides high network throughput, ensuring our network performs at its highest speeds. The security features of this device include Web Threat Detection, Intrusion Prevention System (IPS), URL Filtering, Anti-Malware Protection, Application Filtering, and Firewall Protection to our entire server network.

In addition to the FortiGate appliance, all our servers are protected by a software firewall which is configured to allow access to our network only on the required Internet ports and is constantly monitored for updates and possible attacks.
